

Website Assurance

Your website is your worldwide online presence and is paramount to any modern business' success. The protection of your website should not be left to chance, our Web Assurance service provides you with peace of mind, in knowing that steps have been taken to protect your investment.

Web Assurance includes the management of your website security by enforcing more stringent protocols, scanning your website regularly and monitoring of security events.

Benefits

Now there is a service that can provide the required coverage needed to protect your website from external threats. Web Assurance is designed to implement the essential tools to protect and manage the security of your website. This includes some of the features we can enable:

WordPress Core, Plug-in and Theme Patching

Regular updating is one of the most important things to protect your site. Patching is deployed monthly to actively supported free plug-ins and active licensed packages

Daily Website Backups

Easily restore your website if the need arises

Brute Force Protection

Protects your site against attackers that try to randomly guess login details to your site

Strong Password Enforcement

Ensures that powerful (admin) accounts are protected by strong passwords

Two-Factor Authentication

Greatly increases the security of your user accounts by requiring a rolling code after your normal credentials

404 Detection

Stop malicious users scanning all directories of your website for vulnerabilities

Regular Malware Scans

Protects your website with regular malware scans

Email Notifications

Get notifications based on multiple alerts, such as user lock outs, too many failed attempts, or files being changed

Away Mode

Lock your website to only allow changes during specific times

Google reCAPTCHA Integration

Integrate with Google's reCAPTCHA technology to ensure your users are not robots

File Change Detection

Detect and notify when changes are made to files to help ensure no malicious activity is occurring

Specific IP Address Blocks

Block IP addresses based on attacks

Lock Out Bad Users

Automatically lock out users based on failed login attempts, excessive 404 errors or bot blacklists

Website Assurance Add-on for \$66.00 a month

*Subject to terms and conditions, please refer to www.techno.com.au/terms. Websites must be in Wordpress format, and can only be added to a Techno Web Hosting package, hosting not included. If you have any specific business requirements, please contact us on 1300 130 412 and we can work with you to design a customer solution for your web hosting requirements.
